

REVENUE PATH 02

Revenue Share on Incremental Bookings

A negotiated percentage of the bookings XPMatch can prove it caused.

The claim, and the check

Arithmetic verified. Inputs tested against published prices, September 2026.

YOUR CLAIM

\$1.0M

\$10M attributed GMV at a 10% take.

Arithmetic exact. The word doing the work is 'attributed'.

WHAT THE RESEARCH SAYS

**0.7× every trip
you plan**

\$10M at a \$940 basket is 10,638 bookings — 0.7× every trip your Year-3 model plans, all converting, all accepted as incremental.

What the market actually pays

[V] = verified against a cited public source · [E] estimated · [A] assumed

1	OTA supplier commission (context)	15-30%	[V]
2	Published rate card for revenue-share deals	none	[V]
3	Holdout testing by sophisticated partners	standard	[V]
4	Typical incrementality accepted	20-50%	[E]
5	Your assumed incrementality	100%	[A]

THE BINDING CONSTRAINT

'Incremental' is the hardest word in travel partnerships.

You are asking a partner to agree a booking would not have happened without you. That needs attribution infrastructure, an agreed methodology, and usually a holdout group that mechanically shrinks what you get paid on.

The model

Base scenario from 5-revenue-paths-model.xlsx. Change a driver and this moves.

Year 3 revenue

\$120,000

Year 3 gross profit

\$100,000

Year 3 margin

83%

Year-3 FTE required: 0.33

What has to be true

Three conditions. If any fails, the path does not deliver.

1

Build attribution the partner trusts

Not analytics. A methodology their finance team signs off on.

2

Find a partner willing to negotiate

They negotiate with companies that already have volume. You do not yet.

3

Survive the holdout test

At 30% accepted incrementality, \$10M attributed pays on \$3M.

VERDICT

**Weakest evidence of the seven.
Defer it.**

Not a bad model — a model that requires you to already be big enough that a partner takes the meeting.

Revisit once path 3 gives you a booking curve to negotiate with.
