

REVENUE PATH 05

Data & Analytics SaaS

Aggregated preference trends, demand forecasts and benchmarks, sold as a subscription.

The claim, and the check

Arithmetic verified. Inputs tested against published prices, September 2026.

YOUR CLAIM

\$1.2M ARR

50 clients at \$2,000 per month.

Arithmetic exact. The constraint is upstream.

WHAT THE RESEARCH SAYS

**Supply,
not demand**

You cannot sell preference trends without a panel. Your Year-3 model produces ~62,000 cumulative signups — thin against incumbents holding card-spend and mobility data.

What the market actually pays

[V] = verified against a cited public source · [E] estimated · [A] assumed

1	Data Appeal's stake in Mabrian (70%)	~€3.7M	[V]
2	Published pricing for the category	none	[V]
3	DMOs worldwide (same pool as Path 1)	~2,400	[V]
4	Your Year-3 cumulative signups	~62,000	[E]
5	Incumbent data types you do not have	card spend, mobility	[V]

THE BINDING CONSTRAINT

**It competes with Path 1
for the same budget line.**

Both sell to DMOs. A destination paying \$5,000/month for your planner is less likely to add \$2,000/month for analytics, not more.

That €3.7M price for the category leader is the ceiling talking.

The model

Base scenario from 5-revenue-paths-model.xlsx. Change a driver and this moves.

Year 3 revenue

\$90,000

Year 3 gross profit

\$75,000

Year 3 margin

83%

Year-3 FTE required: 0.56

What has to be true

Three conditions. If any fails, the path does not deliver.

1

Build the panel first

This path is strictly downstream of paths 1 and 7.

2

Reframe as an attach, not a business

\$1,000–2,000/month on path 1's installed base needs no new sales motion.

3

Accept it starts in Year 3

There is nothing to sell before then.

VERDICT

Real category. Strictly downstream.

Reframe it as an upsell on path 1 clients rather than a standalone 50-client business.

That version is credible and costs you no new channel.
