

COMPANY OVERVIEW

XPMatch

Taste-matched travel planning. A stay, three things to do and three places to eat that fit you — on a map, in under a minute.

Contents

A pre-launch business with a working product and no revenue yet.

1

What XPMatch is

The product, the two buyers, and what makes it different from every other AI planner.

2

Where we actually stand

Zero revenue, zero customers, no billing. Stated plainly.

3

The model

Three-year projection, unit economics, and what a buyer would see.

4

The seven revenue paths

Each validated against published market prices.

5

The sequence, the risks, the ask

What XPMatch is

One product, two buyers, one thing nobody else sells.

THE TRAVELLER

\$49/year

Adults 28–45 taking two to four leisure trips a year. Their current system is 40 open tabs, Google Maps lists and saved Instagram reels.

THE ADVISOR

\$49/seat/mo

Independent travel advisors, 0–3 years in the profession, who rebuild the same client proposal every time. 15,000+ sit inside Fora alone.

Why now

Three things landed in 2026 that did not exist before.

- | | | | |
|---|---|----------|-----|
| 1 | US travellers who used AI to plan travel | 37% | [V] |
| 2 | Affluent travellers who did | 43% | [V] |
| 3 | Travel advisors who charge a planning fee | 78% | [V] |
| 4 | Fora advisors — 97% new to the profession | 15,000+ | [V] |
| 5 | Expedia acquired the AI planner Layla | Jul 2026 | [V] |

WHERE WE ACTUALLY STAND

**Zero revenue. Zero customers.
No way to accept payment.**

The product is built and in production. The commercial gates are all still ahead. Every number in this deck is a projection with no trading history behind it — and 20 of 38 modelled assumptions are unverified.

The offer ladder

Five priced offers, anchored to verified competitor pricing.

ENTRY

\$19

Trip Pass — one trip, 60 days. The low-friction first purchase at the moment of intent.

CORE

\$49/yr

Plus — unlimited trips and packages. Priced against Layla \$49.99, TripIt Pro \$49.

MARGIN ENGINE

\$49/mo

Advisor seats — 89% gross margin, ~\$1,600 lifetime value, a \$400 CAC ceiling.

The core model

From 2-financial-model.xlsx. 1,761 live formulas, verified to the cent.

Year 3 revenue

\$427,320

Year 3 gross profit

\$295,873

Year 3 margin

69%

Year-1 SDE is negative: -\$5,575

Unit economics

The catalog work is what makes a \$49/year plan possible at all.

1	Cost per active user, before the place catalog	~\$10/mo	[E]
2	Cost per active user, after	\$1.40-2.00/mo	[E]
3	Gross margin, blended Year 3	69%	[E]
4	Advisor seat gross margin	89%	[E]
5	Business capital required	\$12,061	[E]

The seven revenue paths

Grounded Year-3 revenue after testing every input against published prices.

1	Path 1 · White-label DMO	\$324,000	[E]
2	Path 7 · Premium membership	\$261,250	[E]
3	Path 4 · Group / corporate	\$202,500	[E]
4	Path 3 · Booking commissions	\$189,274	[E]
5	Paths 2, 5, 6 combined	\$282,000	[E]

PORTFOLIO REALITY

**The seven paths do not add up —
and we could not staff them.**

Stated together they total \$8.15M. Counting each unit of demand once they total \$1,103,024 in Year 3.

And the paths switched on require 3.34 FTE against 1.25 available. The honest question is not 'all seven' — it is 'which two'.

The sequence

Four moves, in order. The other three paths wait or get cut.

1

Now — corporate and group planning

The only path needing no users, no volume and no integration. Same motion as concierge at 10-30x the ticket.

2

This week — booking links

One to two days of work, near-100% margin, compounds silently with every trip planned.

3

Months 2-9 — white-label DMO

Start the 6-18 month procurement cycle now. It is the only path a strategic buyer pays a premium for.

4

Months 6-18 — membership at \$49-79

The engine that compounds, priced where the market actually is rather than 3.6x above it.

What could kill this

Named honestly, with the signal that would tell us early.

- 1 Consumers will not pay for another travel app**
Signal: Trip Pass conversion under 2% by week 8. Response: the consumer tier becomes a funnel, not a revenue line.
- 2 Google builds it natively**
It already answers travel questions in AI Mode and books hotels directly. Only the advisor segment would survive.
- 3 Suppliers set our margin**
Google Places and OpenRouter pricing decide gross margin and we control neither.
- 4 Founder concentration**
One person holds every customer relationship. A buyer discounts heavily for that.

THE ASK

\$60,061 — and twelve months.

\$12,061 of business capital plus \$48,000 of founder runway for a year with no draw.

Against \$25,000 available that is a \$35,061 gap. Closing it, or choosing the scenario that does not need it, is the first decision.

NEXT

Sell three trips. Then we will know.

Three paid concierge or corporate trips is the cheapest test that can kill or confirm this plan — and it produces the first cash while doing it.
